Resumo The abstract should briefly summarize the contents of the paper in 150–250 words.

Keywords: Data centers simulation · Management in data centers · Simulation games · Game-Based Learning.

1 Introduction

O mercado de videojogos têm estado em grande crescimento nos ultimos anos, uma prova disso é que em muitos paises ele já ultrapassa a media convencionais como cinema, televisão e jornais. Devido á sua dimensão e relevancia a sua aplicação começa a extrapular o excopto de apenas diversão.

Serius game e jogos de simulação transmitem ao jogador uma experiência interativa com conhecimento agregado. Todavia, estudos como o de *Game-Based Learning with Computers Learning, Simulations* [8], mostram que mesmo jogos criados puramente para o entretenimento exigem que o jogador desenvolva novos conhecimentos, competências e estratégias complexas para avançar de nível ou superar desafios.

Em paralelo com isso, pesquisas como a *Video Games and Indirect Learning* desenvolvida pela Monica Miller [7], apontam que o conteúdo de um videojogo pode ser usado como material educativo de forma indireta, ou seja, sem existir um foco claro do jogo no aprendizado.

Posto isto o objetivo é perceber se existiu aprendizado por parte dos jogadores com o projeto, Port 0, que se caracteriza por ser um videojogo de gestão de recursos cujo objetivo do jogador é gerir um pequeno data centers num cenário fantasioso. O jogador terá de comprar, configurar e gerir servidores, atender a pedidos de clientes e defende-se de ataques.

O universo do jogo contém elementos de ficção científica, todavia apresenta sistemas de simulação, tais como *mini games* de palavras e configuração de servidores. Com isto a ideia é criar uma experiência divertida e interativa para

o jogador, mas que, ao mesmo tempo, transmita conhecimento, quer de forma direta por meio de *mini games*, quer de forma indireta através do contexto em que o jogador se encontra.

1.1 A Subsection Sample

Please note that the first paragraph of a section or subsection is not indented. The first paragraph that follows a table, figure, equation etc. does not need an indent, either.

Subsequent paragraphs, however, are indented.

Sample Heading (Third Level) Only two levels of headings should be numbered. Lower level headings remain unnumbered; they are formatted as run-in headings.

Sample Heading (Fourth Level) The contribution should contain no more than four levels of headings. Table 1 gives a summary of all heading levels.

Tabela 1. Table captions should be placed above the tables.

Heading level	Example	Font size and style
Title (centered)	Lecture Notes	14 point, bold
1st-level heading	1 Introduction	12 point, bold
2nd-level heading	2.1 Printing Area	10 point, bold
3rd-level heading	Run-in Heading in Bold. Text follows	10 point, bold
4th-level heading	<i>Lowest Level Heading.</i> Text follows	10 point, italic

Displayed equations are centered and set on a separate line.

$$x + y = z \tag{1}$$

Please try to avoid rasterized images for line-art diagrams and schemas. Whenever possible, use vector graphics instead (see Fig. 1).

Theorem 1. *This is a sample theorem. The run-in heading is set in bold, while the following text appears in italics. Definitions, lemmas, propositions, and corollaries are styled the same way.*

Demonstração. Proofs, examples, and remarks have the initial word in italics, while the following text appears in normal font.

For citations of references, we prefer the use of square brackets and consecutive numbers. Citations using labels or the author/year convention are also acceptable. The following bibliography provides a sample reference list with entries for journal articles [1], an LNCS chapter [2], a book [3], proceedings without editors [4], and a homepage [5]. Multiple citations are grouped [1,2,3], [1,3,4,5].

Figura 1. A figure caption is always placed below the illustration. Please note that short captions are centered, while long ones are justified by the macro package automatically.

Acknowledgments. A bold run-in heading in small font size at the end of the paper is used for general acknowledgments, for example: This study was funded by X (grant number Y).

Disclosure of Interests. It is now necessary to declare any competing interests or to specifically state that the authors have no competing interests. Please place the statement with a bold run-in heading in small font size beneath the (optional) acknowledgments⁴, for example: The authors have no competing interests to declare that are relevant to the content of this article. Or: Author A has received research grants from Company W. Author B has received a speaker honorarium from Company X and owns stock in Company Y. Author C is a member of committee Z.
